US-09-115-453-120/c

US-09-115-453-120/c

Sequence 120, Application US/09115453B

Patent No. 6657056

GENERAL INFORMATION

APPLICANT: Xu, Jiangchun

APPLICANT: Xu, Jiangchun

TITLE OF INVENTION: COMFOUNS FOR IMMUNOTHERAPY OF PROSTATE CANCER AND

TITLE OF INVENTION: METHODS FOR THEIR USE

PILE REFERENCE: 210121.427C4

CURRENT FILING DATE: 1998-07-14

NUMBER OF SEQ ID NOS: 228

CURRENT FILING DATE: 1980-07-14

NUMBER OF SEQ ID NOS: 228

SOFTWARE: PastSEQ for Windows Version 3.0

SEQ ID NO 120

Novel polypeptides and nucleic acids homologous to transmembrane receptor, thymosin, neuromodulin-like family of proteins for diagnosing, treating cancer, atherosclerosis, neurological, skin and autoimmune disorders.

Claim 1c; Page 143; 323pp; English

The invention relates to 24 novel human proteins designated NOV1-NOV14 (ABB09501-ABB09524), collectively referred to as NOVX proteins, and nucleotides across encoding them (ABQ03879-ABQ03902). NOVX proteins and nucleotides are useful in the treatment, diagnosis or prevention of NOVX nucleotides are useful in the manufacture of a medicament for treating such associated disorders or in the manufacture of a medicament for treating such disorders, with specific applications described for each of the 24 NOVX proteins, based on their homology to known proteins. Various disorders are associated with NOVX proteins including neurological disorders (e.g., Alzheimer's, Huntington's and Parkinson's diseases), ce.g., allergies and autoimmune diseases), myasthenia gravis, cancers (e.g., allergies and autoimmune diseases), myasthenia gravis, asthma, various forms of arthritisy, diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endometriosis, incomninence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, incomninence, psoriasis, scleroderma, alopecia, ulcers, pancreatitis, cirrhosis, glomerular endotheliosis, polycystic kidney disease, endocarine disorders, obesity, bacterial infections and particularly cardiomyopathy, atherosclerosis, cell signal processing-related disorders and disorders of metabolic pathway regulation. NOVX mucleic acids and polypeptides may be used to identification of small molecules that modulate or inhibit processes such contining to a NOVX protein, and are also useful as targets for the binds to a NOVX protein, and are also useful as targets for the cardiomyopanic, and continence of prinmers or probes for foremaic but type and are useful as a source of prinmers or probes for foremaic but of comprising NOVX nucleic acids are useful for producing non-human compressing NOVX nucleic acids are useful for studying the function and for infinity or all protein and for infinity and or all protein and for infinity and all protein and are also useful per producing activity of NOVX proteins and for identifying and evaluating modulators of NOVX activity. The present sequence represents the prostatin precursor like protein NOV14b

Claim 1c; Page 142; 323pp; English

The invention relates to 24 novel human proteins designated NOV1-NOV14 (ABB09501-ABB09524), collectively referred to as NOVX proteins, and mucleic acids encoding them (ABG93879-ABQ93902). NOVX proteins and nucleotides are useful in the treatment, diagnosis or prevention of NOVX associated disorders or in the manufacture of a medicament for treating such disorders, with specific applications described for each of the 24

```
(e.g., allergies and autoimmune diseases), mysethenia gravis, asthma, various forms of arthritis, diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endometriosis, incontinence, psoriasis, scleroderma, alopecia, ulcers, panoreatitis, cirrhosis, glomerular endotheliosis, polycystic kidney disease, endocrine disorders, obesity, bacterial infections and particularly cardiomyopathy, attheosocierosis, cell signal processing-related disorders and disorders of metabolic pathway regulation. NoWX nucleic acids and polyceptides may be used to identify cellular receptors or downstream effectors which binds to a NoWX protein, and are also useful as targets for the identification of small molecules that modulate or inhibit processes such as neurogenesis, cell differentiation, cell motility, cellular profileration, haemacopoiesis, wound healing and angiogenesis. NoWX nucleic acid sequences can be used to identify a cell or tissue type and nucleic acid sequences can be used to identify a cell or issue type and nucleic acid sequences can be used to identify a cell or issue type and nucleic acid sequences can be used to identify a cell or issue type and nucleic acid sequences can be used to identify as the modulate or inhibit processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          are useful as a source of primers or probes for forensic biology and for identifying and coloning NOVX homologues in other cell types. Cells comprising NOVX nucleic acids are useful for producing non-human transgenic animals which are useful for studying the function and activity of NOVX proteins and for identifying and evaluating modulators of NOVX activity. The present sequence represents the prostatin precursor like protein NOV14a. The gene encoding NOV14a is located on chromosome
NOVX proteins, based on their homology to known proteins. Various disorders are associated with NOVX proteins including neurological disorders (e.g., Alzaheiner's, Huntington's and Parkinson's diseases), pain, behavioural disorders, addiction, tuberous sclerosis, cancers (e.g., colorectal cancer, leukaemia and osteosarcoma), immune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 344 AA;

Sanjanwala MM;

WPI; 2002-519664/55. N-PSDB; ABQ75956. New isolated Protein Modification and Maintenance polypeptides, for diagnosis, and treatment of e.g. gastrointestinal disorders

Claim 1 (a); Page 174-176; 200pp; English.

The invention relates to an isolated Protein Modification and Maintenance (PMM) polypeptide. Polypeptides of the invention may be used in the diagnosis, treatment and prevention of disorders associated with decreased expression or activity of PMM. These include gastrointestinal disorders (e.g. Crohm's disease), cardiovascular disorders (e.g. unaemia), cell proliferative disorders, developmental disorders (e.g. anaemia), cell proliferative disorders, developmental disorders, epithalial disorders reproductive disorders (e.g. attainer's disease) reproductive disorders (e.g. ectopic pregnancy), and in gene therapy or a vaccine for such diseases. They may also be used in the assessment of the effects of exogenous compound on the expression of nucleic acid and amino acid sequences of protein modification and maintenance molecules. The found to have homology with rat prostasin

The present invention relates to the isolation of novel human proteases, and the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. inflammatory diseases), brain or neuronal-associated diseases, metabolic coronary thrombosis), brain or neuronal-associated diseases, metabolic disorders (e.g. diabetes, obesity), inflammatory diseases (e.g. metabolic renumatoid arthritis and psoriasis), central or peripheral nervous system diseases, mayaranes, pain, sexual dysfunction, mood disorders, attention disorders, proposed disorders, encological disorders (e.g. Alzheimer's disease, Parkinson's disease) and dyskinesias. The nucleic acids and polypeptides are also useful for treating viral infections caused by human immunodeficiency virus (HIV), and non-viral infections such as ocular disease (e.g. dianomal and acular degeneration. ANUS2702-AAUS2760 represent the novel
                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acids encoding novel human proteases, useful for useful for treating diseases and disorders such as cancers, immune-related diseases and disorders, cardiovascular disease (e.g. restenosis) and inflammatory
```

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Finers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM

human proteases of the invention

This invention comprises the CDNA and protein sequences of an isolated prostasin-like serine protease and reagents and methods for regulating prostasin-like enzyme activity. Prostasin is a trypsin-like serine protease is useful fulid. An antibody specific for prostasin-like serine protease is useful for immunodetection and diagnosis of micro-metastases, autoimmune lesions and renal failure in biopsy specimens, plasma samples and body fluids. The antibody may be used to modulate enzyme activity in a disease, used as metastasis of malignant cells, tumour angiogenesis, inflammation, chronic obstructive used to modulate enzyme activity in a disease, such as metastasis of malignant disease (CoDD), atherosclerosis, neurodegenerative disease (CoDD), atherosclerosis, neurodegenerative disease (CoDD), atherosclerosis, neurodegenerative disease (CoDD), atherosclerosis, neurodegenerative disease (CoDD), atherosclerosis, particularly viral infection. The human prostasin-like serine procease as a crivity, in particular for treating or preventing metastatic cancer. The carpentic target of decreasing human prostasin-like serine provides a ctivity, in particular for treating or preventing may be used to mimic, augment and inhibit the enzyme activity which may be useful to treat osteoporosis, Paget's disease and degradation of bone implants corporosis, Paget's disease and degradation of bone implants and libid accumulation and inhibit the progression of restenosis and atherosclerosis. The nucleic acid sequence is also useful in diagnostic and libid accumulation and inhibit the progression of restenosis and anterosclerosis. The nucleic acid sequence is also useful in diagnostic diseases related to the presence of mutations in nucleic acid sequences which encode the enzyme. The present sequence represents the human procession of prostasin-like serine protease sequence of the invention and inhibit accumulations in nucleic acid sequence of the invention construction of the presence of the invention and invention and inhibit accumul
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                        Novel human prostasin-like serine protease polypeptide and polymucleotide which can be regulated for treating metastasis of malignant cells, inflammation, atherosclerosis, neurodegenerative disease and infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                136 LGADLALIRLASPASLGPAVWPVCLPRASHRFVHGTACWATGWGDVQEADPLPLPWVLQE 195

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed centification of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed centification formal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in diagnostics other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated polynuclectide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 20; SEQ ID NO 35212; 103pp; English.

The present inversion relates to a new method involves comparing the expression level of a marker in a patient sample and the normal level of expression level of a marker in a control non-ovarian cancer sample, where the expression of the marker in a control non-ovarian cancer sample, where the marker is selected from 363 cancer markers described in the characterising cancer, in detecting the presence of cancer as early as possible, and the recurrence of ovarian cancer. The method may also be of particular use with patients having an enhanced risk of developing cancer). The cancer markers may be used in the management and treatment cancer. The cancer as familial history of ovarian cancer. The cancer as disease or parkinson's disease, brain cancer. The cancer markers may be used in the management and treatment cancer. The cancer markers may be used in the management and treatment cancer. The cancer markers may be used in the management and treatment cancer (e.g. bacients may be used in the management and treatment cancer (e.g. bacterial or viral meningities or encephalitis), inflammations (e.g. bacterial or viral meningities or encephalitis), connective tissue disorders (e.g. ontuberculous granulomatous orchitis), connective tissue disorders, or heart disorders (e.g. ischaemic heart disease or atherosclerosis). The compositions and methods may also be used in assessing the histological type of neoplasm associated with the whether ovarian cancer, monitoring the progression of ovarian cancer, determining whether ovarian cancer has metastasized or is labely to metastasize.
                                                                                                 Human; ovarian cancer; marker; cancer; familial history; brain disorder; central nervous system disorder; bacterial meningitis; viral meningitis; Alzheimer's disease; Parkinson's disease; cerebral oedema; hydrocephalus; brain herniation; inflammation; encephalitis; testicular disorder; nontuberculous granullomatous orchitis; connective tissue disorder; heart disorder; ischaemic heart disease; atherosclerosis; neoplasm; histological type; carcinogenic; ovarian cancer marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Assessing whether a patient is afflicted with ovarian cancer, useful in assessing the stage or progression of the disease, comprises comparing the expression level of a cancer marker in a sample from a patient and from a non cancer patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a new method for assessing whether a

The method comprises measuring the concentration of prostatin as protein or mRNA, in a sample and comparing the result with one or more controls, where a level of prostatin expression that is significantly higher than in controls is indicative of cancer, or increased susceptiality. The assay is specifically used to detect ovarian cancer or a predisposition to it, but

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          QPRVVPQTQESQPDSNLCGSHLAFSSAPAQGLLRPILFLFLGLALG---LLSPWLSEH 343
may also be applicable to breast, prostatic, lung and colonic cancers. Using the method of the invention it was shown that in ovarian cancer, the highest levels of prostatin were found in stage II disease, suggesting that this marker is suitable for early detection. The prese sequence represents the human prostasin protein used in the method of invention as a marker for early detection of cancer or susceptability
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MAQKGVIGPGQLGAVA----ILLYLGLLRSGTGAEGAEAP--CG-VAPQARITGGSSAVA

The invention comprises a method for assessing whether a patient is afflicted with breast cancer or ovarian cancer. The method involves the use of specific DNA markers. The method of the invention is useful in the detection and treatment of ovarian and breast cancer. Amino acid sequences ABJ37025 - ABJ37080 represent human breast/ovarian cancer-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              54 GQWPWQVSITYEGVHVCGGSLVSEQWVLSAAHCFPSEHHKE---AYEVKLGAHQLDSYSE 110

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ð
                                                                                    The invention relates to human prostasin-like enzyme polypeptides and polynucleotides. The enzyme can be expressed by standard recombinant methodology. The polypeptide, polynucleotide and modulators are useful for treating diseases like metastasis of malignant cells, tumour angiogenesis, inflammation, chronic obstructive pulmonary disease (COPD), atheroscilerosis, neurodegenerative disease and pathogenic infection, particularly viral infection. The prostasin-like enzyme gene provides a theroscilerosis, neurodegenerative diseases con treating or preventing metastatic cancer. Neurodegenerative diseases include for e.g. prion protein amyloid plaques of Genstmann-Straussler Syndrome, Creutzfeldt-Jakob disease and Scrapie. The agonists and attagonists of the polypeptide may be useful to treat osteoporosis, paged to give prion of bone implants particularly dental implants. Altered levels of human prostasin-like enzyme activity inhibit to both smooth muscle cell proliferation and lipid accumilation and inhibit to the progression of restenosis and atherosclerosis. Anti-human prostasin-like serime protease antibodies are useful for immunodetection and dispussions of micrometastases, autoimmune lesions and renal failure in biopsy specimens, plasma samples and body fluids. The present sequence represents the amino acid sequence of protein identified by Swiss Protein control of the progression of remparison studies with the human prostasin-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  235
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DAKVSTLKDI1PHPSYLQEGSQGDIALLQLSRPITFSRXIRPICLPAANASFPNGLHCTV 170

```
or human polynucleotides or composition conquisation to the inversion and interpretation of the nucleic acid sequence. Also derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nagent that is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for identifying a compound useful in treating pain and animal of one or more of the polynucleotides given in the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that medulates its activity is useful for preparing a medicament for treating pain and spared nerve injury (CNI) in an animal segmental nerve injury (SNI) in an animal companies or this patent did not form part of the printed the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at the value of the print of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention discloses a composition comprising two or more isolated

or human polymucleotides or a polymucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also comprising the vector identifying a nucleotide, sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agente that increases or decreases the expression of the polymucleotide sequence with its differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially compound that regulates the activity of one or more of the composition, a method for identifying a compound or small molecule that regulates the activity of one or more of the regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound or small molecule that regulates the activity is useful for propagation or more of the polypeptides or their antibodies. The polymucleotide or the compound that mod a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. spinal teaching prepared presented is a human protein (shown in Table 2 of the rayersy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note:

Nyllternate names: mast cell tryptase
Nyllternate names: mast cell tryptase
C;Species: Rattus norvegicus (Norway rat)
C;Date: 27-Aug-1995 #sequence_revision 27-Oct-1995 #text_change 20-Jun-2000
C;Accession: JG4171
R;Ide, H.; Itch, H.; Tomita, M.; Murakumo, Y.; Kobayashi, T.; Maruyama, H.;
J. Biochem: 118, 210-215, 1395
A;Title: CDNA sequencing and expression of rat mast cell tryptase.
A;Accession: JG4171
A;Molecule type: mRNA
A;Residues: 1-274 <IDE>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A)Cross-references: DDBJ:D38455; NID:g556555; PIDN:BAA07486.1; PID:g556556
C;Comment: This enzyme is basically specific for a connective tissue mast ceinase inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ||: ::||||||: |:||||| ::|| CGKKLAAQDITPKIVGSSNAKEGAWPWVGLYYGGRLLCGASLVSSDWLVSAAHC-VYGR

C; Comment: This protein, synthesized in the liver, circulates as a noncovalent complex winc; C; Comment: The zymogen is activated by factor XIIa, which cleaves the molecule into a lighar linked by one or more disulfide bonds.
C; Comment: The enzyme cleaves Lys-Arg and Arg-Ser bonds. It activates, in a reciprocal reinnogen and may also play a role in the renin-angiotensin system by converting prorenin in C; Genetics:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A,Molecule type: mRNA

-!- SUBCELLULAR LOCATION: Membrane-anchored (Potential).
-!- TISSUB SPECIFICITY: Expressed in many tissues.
-!- POLYMORPHISM: There are two alleles; gamma-I and gamma-II which differ by 5 residues.
-!- SIMILARITY: Belongs to peptidase family SI. Tryptase subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SEQUENCE FROM N.A.

                 peptidase expressed primarily by the pancreas.";
J. Biol. Chem. 278:3363-3371(2003).
-i. SUBCELBUIAR LOCATION: Secreted.
-i. TISSUE SCIFICITY: Expressed predominantly in the pancreas.
-i. FTM: N-91ycosylated.
-i. SIMILARITY: Belongs to peptidase family S1.
                                                                                                                                                                                                                                                                                                                                                 Hydrolase; Serine protease; Zymogen; Signal; Glycoprotein.
